Emergency Response Branch
26 West Martin Luther King Drive
Cincinnati, Ohio
45268

Dear Ms. Patterson, Ms. Adams, and Mr. Renninger:

Re: Progress Report: September 1 through 30, 2016 South Dayton Dump and Landfill Site, Moraine, Ohio (Site)

This Monthly Progress Report is submitted in accordance with the Administrative Settlement and Order on Consent (ASAOC) for Remedial Investigation/Feasibility Study (RI/FS) Proceeding Under Sections 104, 107, and 122 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, 42 U.S.C. §§ 9604, 9607, and 9622 (United States Environmental Protection Agency [USEPA]) Docket No. V-W-16-C-011) effective June 11, 2016 (RI/FS ASAOC), and the ASAOC for Removal Action Proceeding Under Sections 104, 106(a), 107, and 122 of the CERCLA, 42 U.S.C. §§ 9604, 9606(a), 9607, and 9622 U.S. EPA Docket No. V-W-13-C-010, effective April 8, 2013 (Removal Action ASAOC), for the period of September 1 through 30, 2016.

The next Progress Report for the month of October 2016 will be submitted on or before November 10, 2016.

Significant Developments in this Reporting Period

RI/FS ASAOC Developments

As reported previously the Respondents have initiated activities regarding access agreements for the RI/FS field work. This includes a review of existing access agreements and updates as required based on the proposed work activities and changes in property ownership. As agreed with USEPA, the access agreements for background sampling locations will be developed following sample location selection.

Discussions are ongoing between USEPA, GHD and the owner of the property located at 1951 Dryden Road (Bruce Mangeot of B&G Equipment and Truck Repair), regarding proposed access agreement for work under the RI/FS.

U.S. EPA requested information concerning locations where lead has been detected in surface material at concentrations above threshold concentration values. On August 31, 2016 GHD provided USEPA with two figures from agency reports to help identify areas of the Site that USEPA have deemed locations of interest due to the elevated presence of lead in surficial soil (<2 feet below ground surface). Additional information requested by USEPA included photographs of the general sample locations, to be provided by GHD on behalf of the Respondents, scheduled to be completed in October.

Removal Action ASAOC Developments

On September 1, 2016, USEPA and GHD participated in a conference call regarding the elevated methane levels at soil gas probe GP-2. GHD provided an update of the monitoring results including the single occurrence of methane at GP23-13 on August 29, and the results of laboratory analysis for GP-2 soil gas samples (collected on August 19) which identified the presence of methane and petroleum hydrocarbons (primarily butane). GHD stated that the field monitoring data and GP-2 analytical results indicate a local source of impact, likely associated with the former USTs located at DP&L. GHD also stated that information regarding buried utilities from the Ohio Utilities Protection Service (OUPS) had been requested to determine if preferential gas migration pathways may exist.

On September 9, 2016, GHD provided DP&L (Mr. Arentsen and Mr. Rizer) and the City of Moraine (Mr. Campbell, Chief Copper, and Mr. Eddy) with the analytical results of samples collected from the GP-2 nested probes. The samples were collected as requested by USEPA on August 19, 2016 and analyzed for TO-15 volatile organic compounds (VOCs) and methane. GHD observed that ongoing weekly methane monitoring at GP-2 continued to show readings above the lower explosion limit (LEL) for methane and hence the potential explosion hazard remains.

On September 16, 2016, GHD provided USEPA with an updated summary table of methane monitoring results at GP-2 and Site Area Probes. All probes on the west side of Dryden Road exhibited zero percent methane. The GP-2 results continued to show methane presence consistent with earlier readings.

On September 20, 2016 GHD provided DP&L (Ms. Clark and Mr. Elder) with a summary table of weekly methane monitoring at GP-2. GHD provided an updated summary table on September 30, 2016. GP-2 methane levels remain elevated above the LEL.

On September 21, 2016, GHD provided USEPA and Ohio EPA with a memorandum summarizing Dryden Road Buried Utility Information in advance of the September 22, 2016 conference call.

On September 22, 2016, USEPA and the Respondents participated in a conference call regarding the elevated methane levels at gas probe GP-2.

During the September 22 conference call, the participants discussed the following topics:

- GP-2 unfiltered methane levels remain greater than the LEL and GHD will continue weekly methane monitoring.
- GP23-13 has not been sampled for TO-15 or methane laboratory analysis and has not contained detectable levels of methane since August 29, 2016, nor has it shown an elevated PID response.
- Information and figures contained in the September 21, 2016 buried utility information memorandum
 were obtained through the Ohio Utilities Protection Service (OUPS). OUPS information did not
 contain any specific drawings for storm sewer details. GHD observed storm sewer inlets (i.e., curb
 openings/inlets) during field activities and plotted approximate locations on Figure 2 of the
 memorandum.
- Utilities including sanitary sewer, water main, and gas lines are located on the west side of Dryden Road. Communication lines are present on the east side of Dryden Road. There is no evidence of preferential pathways linking soil gas probe GP-2, located on the east side of Dryden Road adjacent to DP&L, to the west side of Dryden Road and the South Dayton Dump and Landfill Site.
- GHD noted that soil stratigraphy logs indicate permeable material that is not consistent with formation of preferential pathways with buried utilities. Stratigraphy logs for USEPA soil gas probes were not available, but may be located in the USEPA Chicago record center.
- GHD confirmed USEPA's summary that pure methane levels (filtered readings) are less than the LEL
 of 5%, and the unfiltered readings are greater than the LEL because of contribution of petroleum
 hydrocarbons. GHD noted that this summary was supported by the laboratory analysis of GP-2 soil
 gas.
- USEPA inquired as to how confident GHD was that there were no other features or utilities present.
 GHD responded that visual confirmation of the presence of utilities noted by OUPS members has not been confirmed. Respondents will consider an inspection to confirm information from OUPS and to record other relevant information.

Based on the discussions during the September 22 conference call GHD scheduled methane monitoring of soil gas probes, storm sewer inlets and manholes for September 28, 2016.

On September 27 and 28, 2016, GHD completed quarterly inspections of all sub-slab depressurization systems currently in operation at Site buildings.

On September 7, 14, 20, and 28, 2016, GHD completed weekly methane monitoring at GP-2 and Site Area Gas Probes (GP-7, GP-12, GP22-13, GP23-13, GP24A-13, and GP24B-13) in accordance with Addendum 2 of the Vapor Intrusion (VI) Work Plan (GHD, 2015). Filtered methane levels at GP-2 were below 100% of the LEL (<5% methane); unfiltered methane levels at GP-2 were greater than 100% of the LEL, and methane was not detected in any Site Area Gas Probes during the weekly methane monitoring completed in September 2016. GHD will continue to monitor methane at GP-2 and Site Area Gas Probes in accordance with Addendum 2 of the VI Work Plan. Methane monitoring results are provided in Tables 1, 2, and 3.

On September 28, 2016, GHD completed visual inspections and gas monitoring of underground utilities located in the area of GP-2 including storm water inlets 1 through 6 (S.I.-1, S.I.-2, S.I.-3, S.I.-4, S.I.-5, and S.I.-6), manholes 7 through 10 (M.H.-7, M.H.-8, M.H.-9, and M.H.-10), and sanitary manhole 1 (S.M.H.-1). Methane monitoring results of storm inlets and manholes in the vicinity of GP-2 are provided in Table 4.

On September 29, 2016, USEPA and the Respondents participated in a conference call regarding the elevated methane levels at soil gas probe GP-2.

During the September 29 conference call, the participants discussed the following topics:

- Utilities including sanitary sewer, water main, and gas lines are located on the west side of Dryden Road. Communication lines are present on the east side of Dryden Road. There are three pairs of storm water inlets located along Dryden Road in the area of GP-2. GHD completed a visual inspection and methane monitoring at storm water and manholes on September 28, 2016. Storm water inlet and manhole locations are shown on the handwritten markup of Figure 2 (attached).
- GHD's visual inspection determined that storm water flows from east to west across Dryden Road (S.I.-6 to S.I.-1 to M.H.-8, S.I.-5 to S.I.-2 to M.H.-9, and S.I.-4 to S.I.-3 to M.H.-10 and then north through M.H.-10, M.H.-9 and M.H.-8. Methane was not detected at storm water inlets and manholes monitored on September 28, 2016. An LEL of 1% was recorded at S.M.H.-1.
- Methane remains present at GP-2, and unfiltered methane levels remain greater than the lower explosive limit (LEL). Methane was not detected at any of the Site Area Probes and has not been detected since the single occurrence at GP23-13 on August 29, 2016.
- USEPA agreed that the presence of methane at GP-2 is most likely from a Dayton Power & Light (DP&L) source and asked about next steps.
- GHD proposed to submit a memorandum compiling information collected to date with conclusions.
 GHD also requested a reduction in monitor frequency.
- USEPA stated that USEPA and Ohio EPA would discuss the situation with Ohio BUSTR in order to address the GP-2 methane situation with DP&L over the next few months.

- USEPA requested that GHD and Respondents continue weekly monitoring at GP-2, Site Area Probes
 and storm inlets and manholes in the vicinity until methane levels decrease to below the LEL, in
 accordance with the monitoring frequency specified in the Work Plan. GHD and Respondents agreed
 to continue in the short term based on the expectation that concentrations will decrease along with
 lower ambient temperatures.
- Ohio EPA is currently reviewing Bureau of Underground Storage Tank Regulations (BUSTR) reports
 for the DP&L property. Ohio EPA will contact BUSTR to determine if any explosive gas monitoring
 was completed as part of the UST removal at DP&L. USEPA suggested inviting BUSTR to a future
 conference call.

The status for each building requiring mitigation, as of September 30, 2016, is summarized in Attachment A.

Summaries of all Anticipated Problems and Planned Resolutions

No problems were encountered during the reporting month and none are currently anticipated.

Projected Work for the Next Reporting Period

- The Respondents and USEPA On-Scene Coordinator will continue to work together to discuss
 VI mitigation measures and implement the mitigation work plan.
- Negotiating Site Access Agreements with landowners and tenants whose properties currently reside within or adjacent to the Site.
- Complete weekly methane monitoring at GP-2, corresponding Site Area landfill gas probes, and GP-2 area storm inlets and manholes in accordance with Addendum 2 of the VI Mitigation Work Plan.

Should you have any questions on the above, please do not hesitate to contact us.

Sincerely,

GHD

Julian Hayward

Notes:

O₂ - Oxygen

CO₂ - Carbon Dioxide

CH₄ - Methane

LEL - Lower Explosive Limit
U - Qualified as non-detect due to issues with the filter

Value - Value is greater than screening levels for rapid response (USEPA, 2010).

Source of weather data for July to September 2016: https://www.wunderground.com/history/airport/KDAY/2016/9/28/DailyHistory.html?req_city=&req_state=&req_state name=&reqdb.zip=&reqdb.magic=&reqdb.wmo=

¹ - The explosive gas monitor baseline reading was 1 percent LEL. The meter did not zero for LEL readings and the corresponding methane readings were 0 percent; therefore, the readings of 1 percent are anomalous.

 $^{^{[2]}}$ - Combustible Gas measurements from SIM Trainer were not collected during the week of February 20th, due to range

^{[3] -} CO2 readings started at 0.1 ppm.

R - Value was rejected (R) as the LEL reading did not correspond to the methane reading of 0 percent.

PID - Photoionization Detector

Notes:

- The explosive gas monitor baseline reading was 1 percent LEL. The meter did not zero for LEL readings and the corresponding methane readings were 0 percent; therefore, the readings of 1 percent are anomalous.
- The Landtec GEM 2000 combustible gas monitor measures explosive gases as a percent of methane by volume. The presence of other hydrocarbon gases affects methane readings.
- -CO₂ readings started at 0.1 ppm.
- -GHD field personnel noted the presence of a manhole (and a possible underground utility) located ~ 3 feet from GP-2 that may be contributing to elevated methane levels
- [5] Collected SUMMA canister samples at GP-2 (12')(16')
- PID Photoionization Detector
- O₂ Oxygen
- CO₂ Carbon Dioxide
- CH₄ Methane
- LEL Lower Explosive Limit
- NM Not measured
- U Qualified as non-detect due to issues with the filter
- Value Value is greater than LEL for methane (5 percent methane)

Notes:

-CO₂ readings started at 0.1 ppm.

PID - Photoionization Detector

O₂ - Oxygen

CO₂ - Carbon Dioxide CH₄ - Methane

LEL - Lower Explosive Limit

NM - Not measured

U - Qualified as non-detect due to issues with the filter

Value - Value is greater than LEL for methane (5 percent methane)

Attachment A

Summary of Building Status

As of September 30, 2016, the status of each building requiring mitigation was as follows:

Building 8 (B&G Equipment and Truck Repair):

- 30-day proficiency sampling completed on September 12, 2013, with additional confirmatory sampling completed on January 9, 2014 and March 10, 2014.
- 2015 indoor air (IA) and/or sub-slab (SS) soil vapor sampling were completed on February 17, 2015,
 July 15, 2015, and October 6, 2015.
- Sub-slab depressurization system (SSDS) modifications including EP-3 and EP-5 stemline installations were completed on February 5, 2016.
- 60-day post-SSDS modification sampling was completed at Building 8 (B&G Equipment & Truck Repair) on April 13, 2016:
 - Analytical results show significant decreases in SS concentrations.
 - Concentrations at SS-8-B and SS-8-D are less than Ohio Department of Health (ODH) Screening Levels. SS concentrations of TCE at SS-8-A remain greater than ODH Screening Levels.
 - USEPA and Respondents agree that no further modifications to the SSDS are required as vacuum response at the worst-case, sub-slab probe are good and vapor intrusion is not occurring.
 USEPA requests that GHD develop a hybrid annual sampling program that is protective of indoor air at Building 8, prior to committing to annual monitoring.
- Respondents will provide USEPA with a hybrid sampling program for annual monitoring at Building 8.

Building 9 (B&G Equipment and Truck Repair):

- 30-day and 180-day proficiency sampling completed on October 24, 2013 and March 10, 2014, respectively, with additional 180-day confirmatory sampling completed on May 20, 2014.
- Two rounds of 2015 IA and SS soil vapor sampling completed on February 17, 2015, and July 15, 2015.
- SSDS modifications including EP-2 stemline installation and EP-3 installation were completed on February 5, 2016.
- 60-day post-SSDS modification sampling was completed at Building 9 (B&G Equipment & Truck Repair) on April 13, 2016.
 - Benzene and xylene concentrations in IA were greater than the ODH screening levels; however benzene and xylene are not detected (or detected at low levels) in the SS and the IA exceedances are not attributed to vapor intrusion.
 - Analytical results show significant decreases in SS concentrations. However, SS concentrations of TCE at SS-9-A remain greater than ODH Screening Levels.
 - USEPA and Respondents agreed that no further modifications to the SSDS are required but acknowledge the building is not in compliance since SS concentrations remain greater than ODH

screening levels. USEPA requests that GHD develop a hybrid annual sampling program that is protective of indoor air at Building 9, prior to committing to annual monitoring.

Respondents will provide USEPA with a hybrid sampling program for annual monitoring at Building 9.

Building 12 (Overstreet Painting and S&J Precision):

- 30-day proficiency sampling completed on October 24, 2013. A corrective action was implemented on March 6, 2014 and additional confirmatory sampling was completed on April 2 and 3, 2014.
- Two rounds of 2015 IA and SS soil vapor sampling completed on February 18, 2015 and July 13, 2015.
- Respondents and U.S. EPA proposed SSDS modifications to the building owner and tenants during the January 28, 2016 meeting.
- SSDS modifications at Building 12 (Overstreet Painting and S&J Precision) began on April 4, 2016 and were completed by April 13, 2016.
- 60-day post-SSDS modification sampling and annual proficiency sampling completed at Building 12 (Overstreet Painting and S&J Precision) in one joint event on June 15 and 16, 2016, respectively:
 - There are no IA exceedances at S&J Precision.
 - TCE concentration in the SS soil vapor sample collected at SS-12-SJ-B remain greater than ODH screening levels; however concentrations have decreased compared to previous results.
 - The current SSDS configuration produces good vacuum responses at SS-12-SJ-B (-0.2 inches of water column [" w.c.]).
 - USEPA requests the Respondents develop a hybrid annual sampling program that is protective of indoor air at Building 12 (S&J Precision), prior to committing to annual monitoring.
 - Respondents will provide USEPA with a hybrid sampling program for annual monitoring at Building 12 (S&J Precision).
 - TCE concentrations in SS soil vapor samples collected at SS-12-OP-A and SS-12-OP-B are greater than the ODH Screening level and have increased compared to 2015 results.
 - Concentrations of three analytes (benzene, m&p xylenes, and naphthalene) exceeded IA ODH screening levels, but are not detected in corresponding SS samples and are not attributable to vapor intrusion.
 - USEPA and Respondents agree to complete adjustments to the SSDS valves in order to obtain optimal vacuum response. GHD will conduct real time readings with a photoionization detector (PID) during the valve and vacuum adjustments.
 - Respondents will complete confirmatory sampling at Building 12 (Overstreet Painting) after SSDS valve and vacuum adjustments.

Building 14 (NexGen Vending):

- 30-day proficiency sampling completed on January 16, 2014 and 180-day proficiency sampling completed on June 3, 2014.
- Two rounds of 2015 IA and SS soil vapor sampling completed on February 19, 2015 and July 16, 2015.

- A proposed SSDS modification (addition of an extraction point) was agreed upon during the January 28, 2016 meeting.
- SSDS modifications at Building 14 (NexGen Vending) were completed on April 6, 2016.
- 60-day post-SSDS modification sampling and annual proficiency sampling completed at Building 14 (NexGen Vending) in one joint event on June 15, 2016:
 - There are no IA exceedances at NexGen Vending.
 - TCE and 1,1-dichloroethane (1,1-DCA) concentrations in SS soil vapor samples collected at SS-14-A are greater than the ODH screening levels and have increased compared to previous results, including 2012 pre-mitigation results.
 - These results are anomalous and are not in line with previous results based on review of all contributing aspects.
 - USEPA and Respondents agree to complete adjustments to the SSDS valves in order to obtain optimal vacuum response. GHD will collect real time readings with a PID during the valve adjustments.
- Respondents will complete confirmatory sampling at Building 14 after SSDS valve and vacuum adjustments.

Building 15 (SIM Trainer):

- 30-day proficiency sampling completed on February 13, 2014. A corrective action was implemented on April 6, 2014 and additional confirmatory sampling was completed on April 24, 2014.
- Two rounds of 2015 IA and SS soil vapor sampling completed on February 18, 2015 and July 14, 2015.
- Respondents and U.S. EPA proposed SSDS modifications to the building owner during the January 28, 2016 meeting.
- SSDS modifications at Building 15 (SIM Trainer) were completed on April 6, 2016.
- 60-day post-SSDS modification sampling and annual proficiency sampling completed at Building 15 (SIM Trainer) in one joint event on June 17, 2016:
 - There are no SS exceedances at SIM Trainer.
 - IA concentration at IA-15-C is greater than the ODH screening level for tetrachloroethene (PCE); however, PCE was not detected at concentrations greater than ODH screening levels in the corresponding SS-15-C sample, and are therefore not attributable to vapor intrusion.
 - The current SSDS configuration produces good vacuum response at SS-15-C (-0.4" w.c.).
 - U.S. EPA and Respondents agree that no further modifications to the SSDS are required.
- Respondents will complete annual monitoring at Building 15 in winter 2017.

Building 17 (Megacity Construction):

- 30-day and 180-day proficiency sampling completed on January 16, 2014, and June 3, 2014, respectively.
- 1-year proficiency sampling completed on February 19, 2015.
- Annual proficiency sampling was completed on February 10, 2016.
- The building is in compliance.
- Respondents will complete annual monitoring at Building 17 in winter 2017.

Building 24 (Globe Equipment):

- 30-day, 180-day, and 1-year proficiency sampling completed on September 11, 2013, February 7, 2014, and December 5, 2014 respectively.
- One-year confirmatory sampling completed on February 20, 2015.
- Additional confirmatory sampling completed on July 16, 2015.
- SSDS modifications for Globe Equipment were completed on February 13, 2016.
- Annual proficiency sampling was completed on February 11, 2016.
 - The building is in compliance; IA and SS concentrations are less than applicable ODH screening levels.
- Respondents will complete annual monitoring at Building 24 in winter 2017.
